4MP 4G Solar Power Network PT Camera

System Overview

Driven by low power consumption technology, 4G Solar Power Network PT Camera operates safely in areas that do not have access to electricity and the internet. Designed for convenience, it is easy to install, cost effective and supports multiple types of 4G bands to meet the needs of different countries. It features two-way talk which allows you to communicate with people in front of the camera in real-time. The camera is also equipped with smart dual illuminators, which help the camera display clear images in full color, and capture videos of critical events.

Functions

4G

With a built-in high-performance 4G mobile network module, the camera can be directly registered to cloud platforms after a 4G SIM card has been inserted into it. It can be installed anywhere without the hassle of network cables. Users can perform real-time monitoring and remote control of the camera from a mobile client through 4G network.

Starlight

With its large image sensor and large aperture, the camera delivers high performance and quality, even in low-light conditions. The starlight feature allows the camera to capture highly detailed images in accurate color, recognizing targets even at night or in scenes with limited light.

Two-way Talk

With its built-in high-sensitivity microphone and high-power speaker, the camera realizes two-way talk through the mobile app.

- Supports solar power, making it ideal for use in locations that have difficulty accessing electricity and network.
- 4-MP 1/2.8" CMOS sensor, low luminance, and high definition
- H.265 codec that supports high compression ratio and an ultra-low bit
- · Built-in warm light and IR LED.
- Sound and light alarm linkage. When the alarm is triggered, the sound and light will be linked.
- Built in high-performance 4G Module that suits all mobile networks.
- Built-in PIR sensor triggers the camera to quickly track and monitor targets.
- · Supports two-way talk.
- · Supports max. 512 G Micro SD card.

Cyber Security

Dahua network cameras employ a series of security technologies, including security authentication and authorization, access control protocols, trusted protection, encrypted transmission and encrypted storage. These technologies improve the camera's defense against external cyber threats and prevent malicious programs from compromising the device.

Scene

Ideal for use on farmland, pastures, orchards, fish ponds, river channels, highways and other locations that are inconvenient for electric power distribution networks to reach.
